INFORMATION SOURCE RECOMMENDING DEVICE

PUB. NO.: 11-232278 A]

PUBLISHED: August 27, 1999 (19990827)

INVENTOR(s): ODA MITSURU

MINAMI TOSHIAKI

APPLICANT(s): FUJITSU LTD

APPL. NO.: 10-029646 [JP 9829646]
FILED: February 12, 1998 (19980212)
INTL CLASS: G06F-017/30

ABSTRACT

PROBLEM TO BE SOLVED: To recommend an information source highly related to the information source referred to by a user at the present moment without using information like a keyword, etc.

SOLUTION: When a recommendation starting request is inputted in an input part 1, a current information source string at the present moment is transmitted to a recommended information deciding part 5 by a present information source string recording part 2. In addition, a group of referred information source strings is transmitted to a next information source candidate recording part 4 and the recommended information deciding part 5 by a referred information source string storage part 3. A group of the information sources to be included in the group of the referred information source strings is transmitted to the recommended information deciding part 5 as a group of the next information source candidates by the next information source candidate recording part 4. The present information source string, the group of the referred information sources, the group of the next information source candidates are used for individual information sources to be included in the group of the information sources to be referred next and their evaluation values are calculated by an evaluation value calculating means 51 by the recommended information deciding part 5. A recommendation order between respective information sources to be included in the group of the next information source candidate is decided based on the evaluation values and the information on the recommendation order is transmitted to a recommended information source output part 6 by a recommendation order deciding means 52.

Abstract (Basic): JP 11338869 A

NOVELTY - The nodes that relate or fully concur to the word designated by a user, are extracted and arranged. After the user chooses a specific node, the field of interest is stored together with the corresponding information. When information related to a designated word is searched, information from other users is displayed in the search result. DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following: an information recommendation system; a memory medium storing an information recommendation program; an information storage procedure; an information storage apparatus; and a memory medium storing an information storage program.

USE - For information search apparatus.

ADVANTAGE - Enables selected information to be easily acquired.

Enables build up of finer information recommendation service.

DESCRIPTION OF DRAWING(S) - The figure is the flowchart explaining the information recommendation procedure.

Abstract (Basic): JP 11338872 A

NOVELTY - The program extraction condition is determined by referring to keyword search logic data. A keyword search logic data production assistance screen showing a program identifier and the operating characteristic of a word is produced. Visual observation of the screen is confirmed by a user, and a personal channel is generated based on the selectively input keyword. DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following: a search logic generation system; and a memory medium storing a search logic generator for personal channels.

USE - Used in television broadcasting e.g. ground wave broadcast, cable television broadcast and satellite broadcasting.

ADVANTAGE - Desired program can be searched exactly, improving channel selection accuracy. DESCRIPTION OF DRAWING(S) - The figure is the diagram explaining the search logic generation procedure.

JP 11345446 A 17

Abstract (Basic): JP 11345446 A

NOVELTY - Program information about broadcast program and log
information relating to program viewing and listening interest of user
are acquired. The program having user viewing and listening possibility
in future broadcast schedule is searched. A program whose broadcast
time zone overlaps with searched program, is examined. A program having
high viewership is automatically set as video recording candidate.

USE - For recording broadcast video on video tape.

ADVANTAGE - Failure of overlooking a program is prevented.
